

We are pleased to present to you the annual Water Quality Report for the year 2023. This report is designed to inform you about the quality of your water and services we deliver to you every day (*Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien*). Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Our water source(s) are listed below:

Source Name	Source Water Type	Source Water Body Name
Well #1	Ground Water	Chicot Acquafer
Well #2	Ground Water	Chicot Acquafer
Well #3	Ground Water	Chicot Acquafer
Well #4	Ground Water	Chicot Acquafer
Well #6	Ground Water	Chicot Acquafer
Well #7	Ground Water	Chicot Acquafer

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

Microbial Contaminants – such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants – such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides – which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic Chemical Contaminants – including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

Radioactive Contaminants – which can be naturally-occurring or be the result of oil and gas production and mining activities.

A Source Water Assessment Plan (SWAP) is now available from our office. This plan is an assessment of a delineated area around our listed sources through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply’s susceptibility to contamination by the identified potential sources. According to the Source Water Assessment Plan, our water system had a susceptibility rating of ‘MEDIUM’. If you would like to review the Source Water Assessment Plan, please feel free to contact our office.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. We want our valued customers to be informed about their water utility. If you have any questions about this report, want to attend any scheduled meetings, or simply want to learn more about your drinking water, please contact JOSEPH GUIDRY at (337) 316-0674.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. THE CITY OF BREAUX BRIDGE WATER SYSTEM is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

The Louisiana Department of Health and Hospitals – Office of Public Health routinely monitors for constituents in your drinking water according to Federal and State laws. The tables that follow show the results of our monitoring during the period of January 1st to December 31st, 2023. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

In the tables below, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we’ve provided the following definitions:

Parts per million (ppm) or Milligrams per liter (mg/L) – one part per million corresponds to one minute in two years, or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (ug/L) – one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) – picocuries per liter is a measure of the radioactivity in water.

Treatment Techique (TT) –an enforceable procedure or level of technological performance which public water systems must follow to ensure control of a contaminant.

Action Level (AL) – the concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum contaminant level (MCL) – the “Maximum Allowed” MCL is the highest level of a contaminant that is allowed in drinking water. MCL’s are set as close to the MCLG’s as feasible using the best available treatment technology.

Maximum contaminant level goal (MCLG) – the “Goal” is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLG’s allow for a margin of safety.

Maximum residual disinfectant level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Level 1 Assessment – A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment – A very detailed study of the water system to identify problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

During the period covered by this report we had below noted violations.

Compliance Period	Analyte	Type
No Violations Occurred in the Calendar Year of 2023		

our water system tested a minimum of 10 samples per month in accordance with the Total Coliform Rule for microbiological contaminants. With the microbiological samples collected, the water systems collects disinfectant residuals to ensure control of microbial growth.

Disinfectant	Date	Highest RAA	Unit	Range	MRDL or MCL	MRDLG or MCLG	Typical Source
Chlorine	2023	1.5	ppm	0.0 – 6.3	4	4	Water additive used to control microbes

In the tables below, we have shown the regulated contaminants that were detected. Chemical Sampling of our drinking water may not be required on an annual basis; therefore, information provided in this table refers back to the latest year of chemical sampling results.

The State of Louisiana regularly monitors source water per State and Federal regulations. Treated water samples are monitored to further evaluate compliance.

Source Water Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ARSENIC	3/20/2023	26	9.6 – 26	ppb	10	0	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production waste
BARIUM	12/10/2023	0.41	0.41	ppb	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
FLOURIDE	12/10/2023	0.2	0.2	ppm	4	4	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories

Treated Water Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ARSENIC	5/16/2023	4.2	3.2 – 4.2	ppb	10	0	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production waste
Nitrate-Nitrite	12/10/2023	0.1	0.1	ppb	10	10	Runoff from fertilizer use. Leaching from septic tanks, sewage; Erosion of natural deposits.

Source Water Radiological Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
COMBINED RADIUM (-226 & -228)	12/10/2023	1.53	1.53	pCi/l	5	0	Erosion of natural deposits
GROSS ALPHA PARTICLE ACTIVITY	12/10/2023	2.34	2.34	pCi/l	15	0	Erosion of natural deposits
GROSS BETA PARTICLE ACTIVITY	12/10/2023	2.42	2.42	pCi/l	50	0	Decay of natural and man-made deposits. NOTE: The gross beta particle activity MCL is 4 millirems/year annual dose equivalent to the total body or any internal organ. 50 pCi/l is used as a screening level.
RADIOU-226	12/10/2023	1.53	1.53	PCI/L	5	0	

Lead and Copper	Date	90 th Percentile	Range	Unit	AL	Sites over AL	Typical Source
COPPER, FREE	2020 – 2023	0	0	ppb	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2020 - 2023	1	1 - 2	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Period	Highest LRAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	1213 S. MAIN ST	2022 - 2023	27	19 – 29.9	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	606 LATIOLAIS	2022 - 2023	32	23.7 – 29.7	ppb	60	0	By-product of drinking water disinfection
TTHM	1213 S. MAIN ST	2022 - 2023	67	53.6 – 81.5	ppb	80	0	By-product of drinking water chlorination
TTHM	606 LATIOLAIS	2022 - 2023	77	63.5 – 88.3	ppb	80	0	By-product of drinking water chlorination

Source Secondary Contaminants	Collection Date	Highest Value	Range	Unit	SMCL
ALUMINUM	12/10/2023	0.03	0.03	MG/L	0.2
IRON	12/10/2023	4.15	4.15	MG/L	0.3
MANGANESE	12/10/2023	0.16	0.16	MG/L	0.05
PH	12/10/2023	6.04	6.04	PH	8.5

Treated Secondary Contaminants	Collection Date	Highest Value	Range	Unit	SMCL
IRON	12/10/2023	0.03	0.03	MG/L	0.3

Unresolved significant deficiencies that were identified during a survey done on the water system are shown below.

Date Identified	Facility	Code	Activity	Due Date	Description
03/15/2021	WATER SYSTEM	20CC17 A	GWR ADDRESS TT45 DEFICIENCIES	7/7/2021	LAC 51:XII.344.A-B – A. As used in this Section, “mandatory containment practices” means the containment practices prescribed in and required by the state Uniform Construction Code, LAC 17:1, including maintenance and testing requirements, and any additional or related requirements of this Part. B. In order to protect its water supply from potential contamination, each water supplier shall make a reasonable effort to ensure that only customers who comply with mandatory containment practices connect or remain connected to its water supply.

++++++Environmental Protection Agency Required Health Effects Language++++++

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Additional Required Health Effects Language:

Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system, and may have an increased risk of getting cancer.

While your drinking water meets EPA’s standard for arsenic, it does contain low levels of arsenic. EPA’s standard balances the current understanding of arsenic’s possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Infants and children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home’s plumbing. If you are concerned about elevated lead levels in your home’s water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water. Additional information is available from the Safe Drinking Water Hotline (800-426-4791)

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

There are no additional required health effects violation notices.

+++++

Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers.

We at the City of Breaux Bridge Water System work around the clock to provide top quality drinking water to every tap. We ask that all our customers help us protect and conserve our water resources, which are the heart of our community, our way of life, and our children’s future. Please call our office if you have any questions.

CITY OF BREAUX BRIDGE WATER SYSTEM

Parish: ST MARTIN

PWSID: LA1099003

2023 Water Grade

 Federal Water Quality	<p>Points deducted for federal violations, which include Treatment Technique and Maximum Contaminant Level Violations, may pose a public health risk over an extended period of time.</p> <p style="text-align: right;">Max of 30 points</p>	<p>-0</p>
 State Water Quality	<p>Points deducted for state violations, which include no water operator, inadequate water disinfection, and boil notices and water outages, may lead to other issues of concern if not resolved.</p> <p style="text-align: right;">Max of 10 points</p>	<p>-1</p>
 Financial Sustainability	<p>Points deducted for lack of financial sustainability which can affect operations and maintenance of the water system. An effective water rate can provide for the repair, maintenance, and future replacement of infrastructure.</p> <p style="text-align: right;">Max of 10 points</p>	<p>-5</p>
 Operations & Maintenance	<p>Points deducted for operation and maintenance deficiencies noted during water system inspections, which may affect the water quality being distributed to consumers.</p> <p style="text-align: right;">Max of 15 points</p>	<p>-3</p>
 Infrastructure	<p>Points deducted for infrastructure deficiencies noted during water system inspections, which may lead to unsafe drinking water and/or water service disruption.</p> <p style="text-align: right;">Max of 20 points</p>	<p>-0</p>
 Customer Satisfaction	<p>Points deducted for customer complaints received by the water system and/or the Louisiana Department of Health, which are confirmed to be a water quality or quantity issue in the water system.</p> <p style="text-align: right;">Max of 10 points</p>	<p>-5</p>
 Secondary Contaminants	<p>Points deducted for levels of iron and/or manganese greater than the secondary maximum contaminant levels. These levels do not pose a health risk but may cause undesirable water quality issues.</p> <p style="text-align: right;">Max of 5 points</p>	<p>-0</p>
 BONUS	<p>Points granted for having an asset management plan; a storage assessment and maintenance program; well assessment & maintenance program; participation in management training; or participation in a capacity development program.</p> <p style="text-align: right;">Max of 10 points</p>	<p>+0</p>

Standard	Standard Maximum	Point Deductions	Detailed Assessment of Standards		System Deductions
Federal Water Quality	-30	5 each	Maximum contaminant level violations:	0	-0
		5 each	Treatment technique violations for Lead and Copper Rule	0	
		10	Is the system non-compliant with an administrative order?	No	
State Water Quality	-10	1 each	Chlorine violations	1	-1
		5	Does the water system have an operator?	Yes	
		5 each	Water outages and/or boil notices	0	
		5	Did the system submit an acceptable rate study or implement an adequate rate?	No	
Financial Sustainability	-10	5	Did the water system submit an acceptable audit?	Yes	-5
		10	Is the system under a fiscal administrator for poor financial management practices?	No	
		5	Are there other negative circumstances that affect fiscal control of the water system?	No	
Operations & Maintenance	-15	3 each	Unresolved significant deficiencies	1	-3
		5 each	Unresolved significant deficiencies	0	
Customer Satisfaction	-10	1 each	Valid water complaints reported	5	-5
		10	Did the system submit a water complaint log?	Yes	
Secondary Contaminants	-5	5	Manganese and/or Iron level(s) over the secondary maximum contaminant level(s)	No	-0
Bonus	+10	5 each	Asset management plan, storage or well assessment & maintenance plan, participation in capacity development or management training	0	+0
Total Deductions + Bonus					-14
Score					85 / 100 = 85%
